**Name    cwLayoutFilteredListBox Version 1.0**

**Updated by** Jerome GRONDIN

# Description

This layout is used to filter objects in Edit Mode as it is not possible to filter data (using filters configured in Evolve Designer) using a classic List Box.

# Installation

https://github.com/casewise/cpm/wiki

## Node setup

Create a tree like the following one :

☐

Then, create an index page, which name is the one filled in the layout options. Please don't forget to set up the *Node ID* option so the ID of the node in the index page matches the one used for the layout (cf. below)

☐

☐
